Emergency Reboot Procedures

The following should be performed in order from Soft to Hard in the event that the FIB computer becomes unresponsive to commands. Please contact the Lab Manager before attempting the Hard Reboot. Also send an email to the Lab manager in the event that you had to use any of the Reboot Procedures. Thanks.

- **Soft Reboot**
  Simply involves turning off the FIB Server and restarting. Solves 90% of most problems.

- **Medium Reboot**
  Involves turning off the FIB server and rebooting the Computer PC.

- **Hard Reboot**
  Involves turning off the FIB Server and setting FIB to standby followed by shutting down PC. The Button on the front of the FIB is pressed to turn green and then the PC can be rebooted.
